

HDMI Firmware upgrade for C11a by RS232 port

Be sure the cinema 11a is connected to your computer through the Cinema 11a's serial port (RS232)

Apply power to the Cinema 11a and power on.

Start the Flash Magic software application. Then ensure the following settings are made in the Flash Magic software:

Step 1

Com port: set to the appropriate value for your computer (basic is com1)
Baud Rate: 57600
Device: LPC2132
Interface: None (ISP)
Oscillator frequency: 12M

Step 2

Check box for "Erase blocks used by Hex file"

Step 3

Navigate to latest firmware file.

Step 4

No need to do anything under step 4.

While aiming the remote at the front panel of the unit, use the numerical keypad section of the remote and enter the code "8525". The front panel VFD of the C11a will then display "HDMI software update ..."

Step 5

Click start within the Flash Magic program to begin software install.

Remove the power cable after the download has finished, then disconnect the RS232 cable.

Reapply power to the Cinema 11a and power on.
